

MULTIMAX™ AND OPTIMAX™

**OPTIMAX™ Feeder –
Available for either
2-inch or
1 3/4-inch tubes**

/// ROXELL®

MULTIMAX™

1

Excellent start with less feed and less work.

Automatic fresh feed supply

The special Roxell feed windows and the high cone in the pan allow a fast, automatic filling of the pans, without overflowing. From the very start, turkey poults are

supplied with plenty of fresh feed, spread over the whole pan surface. The striking Multimax color combination immediately attracts birds' attention.

Safe for day-old poults

Thanks to the open-pan concept, poults can easily get in and out of the pan. It also respects the natural eating habits of turkey poults. The smoothly finished supports prevent injuries.

Feed savings from the start

The pan supports and the feed-saver rim constitute one unit. This prevents the poults from working feed out of the pan. Because manual refills are no longer needed and fewer extra feeding spaces are to be provided, feed and labor costs are further reduced.

Low production costs and superior technical results during the rearing period.

Minimal labor costs

After the starting period, the lines are winched up, either manually or automatically. All feed windows are automatically shut down. The feed now enters the pan from the bottom of the feed level tube. The pan still remains in the litter for a couple of days in order to allow easy feed access.

Considerable feed savings

Your birds will eat nicely from the edge. The anti-waste wings, the grill and the feed-saver rim reduce feed waste. The Multimax pan features an exclusive W-shape with built-in feed trough. Your birds will eat comfortably, without spilling, from a low feed-level pan.

Simple feed control

By means of a convenient, multi-setting adjustment ring, you can set the feed level very accurately. This allows ideal

control of feed consumption.

Excellent conditions for uniform growth

The distribution of fresh, undamaged feed is effected with a capacity of 900 lbs./hour. The anti-waste wings divide the pan in separate feeding spaces. This way each bird has an equal chance at the feed.

Excellent slaughter quality

The pan is free-rotating and self-leveling to avoid bird injuries. The anti-perch wire immediately returns pans to their horizontal position and keeps on leveling the feed time after time. Also the careful finishing of the pan supports and the open pan concept contribute to optimum slaughter quality.

3

Ideal for finishing turkey hens.

Unique anti-waste collar

For finishing turkey hens from about six weeks, you can provide each pan with an anti-waste collar, which is easy to install. It increases the distance between the pan edge and the feed trough. Any leftovers fall back into the pan.

4

A clean installation in no time after each flock

Multimax is easy to clean with a high-pressure cleaner. The pans can be delivered with hinges, so that they can drip dry by themselves. For a thorough cleaning, you can easily take the pans off the tube or entirely disassemble them. The Multimax pan assembly includes only five parts (or six with the anti-waste collar).

OPTIMAX™

1

Easily replace worn-out pans on existing two-inch tube systems.

Retrofit existing equipment quickly and easily. Retrofit version is designed to fit existing two-inch (51-mm) diameter feeder lines, augers and motors to replace worn-out or obsolete adult turkey feeders.

2

Important feed savings.

Thanks to the unique, modern W-shape of the pan, the feed flows to the deepest point, **away from the pan edge**. An incorporated feed trough, combined with a high central cone, allows turkeys to feed comfortably from a pan with a low feed level. The cover and the wide feed-saving rim counteract the aggressive eating behavior of the birds. Selective feeding and feed waste are virtually impossible!

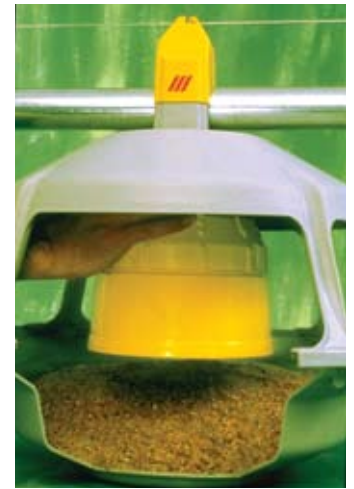

3

Labor saving.

Roxell's Optimax ensures considerable labor savings during the whole cycle. The high feed level, easily adjusted – either manually or with a small central winch – gets birds off to an excellent start. Birds quickly familiarize themselves with the feeding system!

Roxell's exclusive transport auger takes the fresh and undamaged feed to the birds at a high speed. Precise feed level adjustment with clear marking (10 positions) is very easily carried out. This results in an equal feed level for all pans in the house.

4

Excellent slaughter quality.

The name Optimax is a byword for optimum slaughter quality. This aspect was highlighted when developing the current pan design. All plastic parts are well-rounded to prevent injuries. Optimax pans swing away if pushed, avoiding damage to the birds. Beak-trimmed turkeys can feed effortlessly from the pan. There are no rust spots that could injure the birds.

5

Optimax: turkey-proof and durable.

Optimax resists any aggressive treatment by turkeys. All connections are so well-designed that birds cannot loosen any of the parts. Pan supports are strongly connected to the pans. An anti-perch wire prevents turkeys from perching on the tubes. Sturdy parts, made of synthetic material, make the Optimax pan an extremely wear-resistant product.

6

Minimum maintenance, maximum hygiene.

Optimax is extremely maintenance friendly. The parts are quickly and easily cleaned. The carefully finished surfaces and the absence of dead corners guarantee optimum hygiene. Pans can also be suspended with hinges. If, for hygienic reasons, you want to remove the whole pan for cleaning, it is done quickly by removing the nylon top support through a simple slide connection.

Roxell's Multimax™ and Optimax™ Feeders give you years of reliability.

A 10-year guarantee on auger!

■ Roxell feeders are made using high-quality synthetic material. It resists any currently used cleansing agents and disinfectants. In addition, it is very UV-, shock- and scratch-resistant.

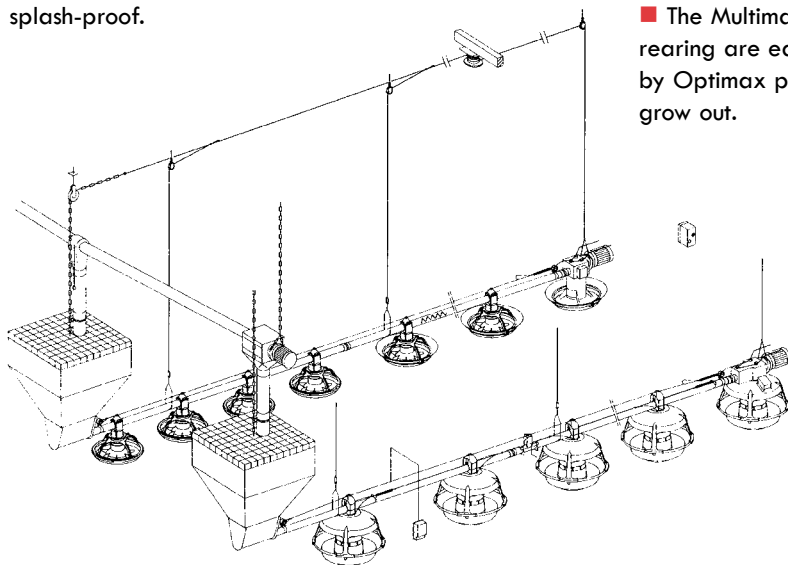

■ The Roxell auger, known all over the world for its exceptional quality, meets the highest standards.

■ A control unit on each line guarantees the regular supply of fresh feed. The energy-saving motor is IP54 insulated and therefore, splash-proof.

Multipurpose system:

■ The Multimax pans for rearing are easily replaced by Optimax pans for grow out.

Roxell reserves the right to make any modifications to improve its products or systems without prior notification.

MULTIMAX™ and **OPTIMAX™** are exclusive Roxell systems. The entire range of Roxell products comprises feed bins, feed transport systems, and drinking and feeding systems for poultry.

At Roxell you can count on excellent assistance and service by experienced distributors and our own personnel.
